## 1 and 2-Channel AC Signal ESD Protector

### Product Description

The CM1214A ESD protector is used to protect bipolar signal lines against electrostatic discharge (ESD). The CM1214A allows operation in high-speed environments with signals levels up to  $\pm 5$  V.

The CM1214A comes in two versions:

- The CM1214A-01SO is a single channel ESD protector and is available in a 3-lead SOT23-3 package.
- The CM1214A-02MR is a dual channel ESD protector and is available in an 8-lead MSOP-8 package.

The low sub-1 pF loading capacitance makes the CM1214A-01SO ideal for protecting high-speed interfaces including RF switches and amplifiers.

The CM1214A-02MR is ideal for dual high-speed signal pairs used in Gigabit Ethernet, ADSL, etc. The CM1214A-02MR can also be used for higher transmit voltage applications by connecting the two channels in series.

### Features

- Single Channel ESD Protection for an AC Signal Up To  $\pm 5$  V for 0.25 W Transmit Power
- Connects Two Channels in Series for Signals Up To  $\pm 10$  V (1 W transmit power)
- $\pm 8$  kV ESD Protection Per IEC 61000-4-2 Contact Discharge
- Sub-1pF Loading Capacitance
- Minimal Variation with Voltage and Temperature
- Each I/O Pin Can Withstand Over 1000 ESD Strikes\*
- SOT23-3 and MSOP-8 Packages
- These Devices are Pb-Free and are RoHS Compliant

### Applications

- RF Switch and Amplifier Protection
- RF Modules and RF IC Protection
- Wireless Handsets and WLAN

\*Standard test condition is IEC61000-4-2 level 4 test circuit with each pin subjected to  $\pm 8$  kV contact discharge for 1000 pulses. Discharges are timed at 1 second intervals and all 1000 strikes are completed in one continuous test run. The part is then subjected to standard production test to verify that all of the tested parameters are within spec after the 1000 strikes.

## PERFORMANCE INFORMATION

### Typical Capacitance Characteristics vs. Voltage

CM1214A illustrates how the loading capacitance remains mainly flat across the voltage range from 0 V to 5 V, the voltage between CH pins.

**Figure 1. CM1214A Capacitance vs. Voltage**

### Typical Voltage Current (VI) Characteristics (low current)

CM1214A shows how the CM1214A experiences a symmetrical I/V curve, without any snapback or trigger voltage. It gradually starts to turn on at about 6 V and clamps above 7 V.

### Typical Voltage–Current (VI) Characteristics (high current, pulse condition)

CM1214A shows how the CM1214A experiences a symmetrical I/V curve, without any snapback or trigger voltage. The curve shows only one polarity.

## APPLICATION INFORMATION

### CM1214A-01SO

The CM1214A-01SO protects a single bipolar signal line often found in RF circuits. One I/O pin (pin 1 for example) is connected to the signal line for protection, and the other I/O pin is tied to GND. It is important to have a solid ground connection to reduce the clamping voltage. *Pin 3 of the 3-lead SOT23 must be left open (and not connected on the PCB).*

### CM1214A-02MR

The CM1214A-02MR protects two bipolar lines, such as for Gbit Ethernet. The PCB traces underneath the package connect across to the corresponding pins (Pins 1, 4, 6 and 7). *Pins 2, 3, 5 and 8 of the MSOP-8 package must be left open (and not connected on the PCB).*

Any disturbance on the line above or below the standoff voltage is clamped.
